Assistant Commissioner for Patents  
Washington, D.C. 20231COPY OF PAPERS  
ORIGINALLY FILEDRESPONSE UNDER 37 CFR 1.116

Dear Sir:

This is in response to the final Office Action of March 22, 2002, in which claims 1-43, 45-97, and 99-113 are pending.

The final Office Action mailed March 22, 2002 rejected claims 1-3, 58-60, and 112-113 under 35 U.S.C. § 102 as anticipated by *Cianfrocca et al.* (US 6,088,796), claims 50-55 and 104-109 as obvious under 35 U.S.C. § 103 over *Cianfrocca et al.*, claims 4 and 61 over *Cianfrocca et al.* in view of *Carroll* (US 6,105,131), claims 5 and 62 over *Cianfrocca et al.* in view of *Riggins* (US 6,131,116), claims 6-7 and 63-64 as obvious over *Cianfrocca et al.* and *Riggins* in view of *Radia et al.* (US 5,848,233), claims 8-9 over *Cianfrocca et al.*, *Riggins*, and *Radia et al.* in view of *Chung et al.* (US 6,012,090), claims 10-19 and 66-75 over *Cianfrocca et al.*, *Riggins*, and *Radia et al.* in view of Official Notice; claims 21-24 as obvious over *Cianfrocca et al.*, *Riggins*,

and *Radia et al.* in view of *Elliott et al.* (US 5,610,915). Claims 25-43, 45-49, 76-97, and 99-103, and 110-111 have been objected to as allowable but dependent on a rejected base claim.

As a preliminary matter, claim 20 was not addressed in the final Office Action, although the Office Action Summary indicates that claim 20 was rejected. The basis for the rejection is unknown because claim 20 was previously indicated to be allowable. Therefore, this rejection is respectfully traversed the rejection pursuant to 35 U.S.C. § 132. See *Chester v. Miller*, 15 USPQ2d 1333 (Fed. Cir. 1990) (Rejection "is so uninformative that it prevents the applicant from recognizing and seeking to counter the grounds for rejection.")

The rejection of claims 1-24, 58-75, and 112-113 is respectfully traversed because the references fail to teach or suggest the limitations of the claims. For example, independent claim 1 recites:

one or more client applications integrated within a web-based GUI and **downloaded** from the one or more secure web servers according to pre-determined customer entitlements

Independent claim 58 recites:

initiating a **download** of a web-based GUI from said secure web server, said downloaded web-based GUI of launching one or more of a plurality of client applications available to a customer according to pre-determined customer entitlements

Independent claim 112 recites:

a client application integrated for use within the browser and **downloadable** from the web server in accordance with a predetermined customer entitlement, said client application programmed to be in interactive communications with the network management resource.

Independent claim 113 recites:

initiating a **download** of a client application integrated for use within the browser in accordance with a predetermined customer entitlement, said client application programmed to be in interactive communications with the network management resource

This feature is not shown in the applied references. For example, *Cianfrocca et al.* is directed to a secure access query system that includes a messenger system 103 which receives queries from a user over the Internet 101 and relays the queries to a firewall 104, which acts as the intermediary to the application servers 105 inside the firewall 104. Only the applications on the application servers 105 are allowed to access the database management system 106. (col. 6:5-22) *Cianfrocca et al.* is primarily concerned with the implementation and functionality of the messenger system 103 and does not get into any detail on the client applications more relevant than they are “custom-written” (col. 17:14). In particular, *Cianfrocca et al.* fails to disclose whether the client applications are downloaded from a secure web server, much less whether that downloading is done “according to pre-determined customer entitlements.”

The portions of *Cianfrocca et al.* cited in the Office Action for this feature do not support the rejection. Specifically, col. 14:20-24 is directed to the use of browsers as clients for distributed applications (col. 14:20-23) and discloses that distributed applications includes individual application programs that are “linked together by means of a single messenger system” (col. 14:24-27). This portion, however, includes no discussion of the details or even the existence of downloading client applications. In fact, col. 12:47–13:50 disclose that the application program resides on the application server, which must be **inside** the firewall, thereby teaching against downloading an application to a user browser, who is **outside** the firewall.

The remaining portions of *Cianfrocca et al.* also fail to disclose the downloading feature. FIG. 6 merely states that “Firewall does not allow any incoming traffic to the Database Server and Application Servers,” with no discussion of downloading. Column 19:1-34 promotes another reason (and hence another teaching against) for keeping all the application servers 105 and their application programs inside the firewall 104. Column 20:8-32 discusses the use of a

gateway but does not touch upon downloading applications. Finally, col. 6:28-35 locates the application on the application server **105** inside the firewall for security reasons.

The Examiner's response to arguments on p. 16, para. 41, of the Office Action did not directly address the downloading feature but hinted that downloading an application from a secure server would read upon authenticating a user to access an application server through a firewall. This reading is insufficient to disclose the downloading feature. In *Cianfrocca et al.*, granting the user access to the application server **105** through the firewall **104**, on the other hand, allows the user to send queries and other commands to the application server **105** (col. 6:38-49), without any disclosure of actually downloading an application from the application server **105**.

The secondary references, *Carroll*, *Riggins*, *Radia et al.*, *Chung et al.*, and *Elliott et al.* which were applied only for various details unrelated to downloading, also do not teach or suggest this feature.

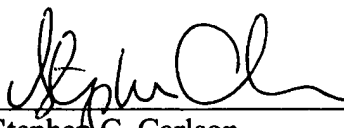

Claims 10-9, 50-55, 66-75, and 104-109 have been rejected by taking Official Notice of certain features. Pursuant to the MPEP § 2144.03, Applicants respectfully resubmit the traversal of the Official Notice and request the Examiner to produce references showing the claim features or withdraw the rejection as factually inadequate. For example, the Examiner is requested to produce a reference showing the specific use of cookies as recited in claims 50-53 and 104-109, and the specific use of polling, inboxes, and metadata recited in claims 16-19.

Therefore, the present application, as amended, overcomes the objections and rejections of record and is in condition for allowance. Favorable consideration is respectfully requested. If any unresolved issues remain, it is respectfully requested that the Examiner telephone the undersigned attorney at (703) 425-8508 so that such issues may be resolved as expeditiously as possible.

Respectfully Submitted,

DITTHAVONG & CARLSON, P.C.
